

main.c- Holds the menu and calls the relevant files for File IO, sorting, user persistence, stacks/queues, and a log of transactions

persist.h
Contains the relevant forward declarations, headers, and constants for persist.c

bank.h
Contains the forward declarations and necessary includes from other files. Also stores relevant constants

bank.c
holds all the stacks, queues, structs, and the general overview of brobank's data in some structured form.

transaction_log.c
We write the bank's transactions for multiple accounts into a .txt file
Also we can undo transactions

persist.c
Allows files to be saved and output to be saved through multiple sessions by writing and working with our file. We can also have multiple accounts.

brobankdata.txt
transactions.txt

adt.c
This file contains the basic forms of queues, structs, BFS, and DFS. bank.c includes them and changes or uses their implementation but here we have the same defaults.

transaction_log.h
We have forward declarations constants, and header files needed for transaction_log.c

sort.c
Here we have our bubble sort for our basic sorting

adt.h has the various headers, constants, and forward declarations for adt.c

sort.h, Here we have the relevant constants, forward declarations, and headers for sort.c
